

Recording guide — click by click

Companion to SCRIPT.md. This is the operating half: what to click, when, and what should appear before you speak the next line.

Setup (5 minutes, before you record)

#	Action	Why
1	Start gateway + frontend	—
2	Browser 1600×900, zoom 100%, hide bookmarks	matches the tuned layout
3	Click HOW , wait for the corridor to draw, then close it	warms corridor + ground layers so they appear instantly on camera
4	FILTERS → tick <i>Show all tracked objects</i> → wait → untick	warms the catalogue for the GPU screen
5	STORMS → REPLAY GANNON → LIVE	warms the storm zones
6	Reload the page	clean boot animation
7	Dry run once with wifi off	proves it survives the venue

The sequence

0:00 — Open

Click: nothing. **Screen:** boot bar, globe flies in, **BLOCKED** 44% appears left. **Say:** section 1 of the script (what it is, Round 1 recap). **Cue for next:** finish the sentence "...refuse to act on risk it cannot justify."

0:25 — The signal

Click: nothing — just point at the card. **Screen:** the compact signal row: state word, %, four-colour bar. **Say:** section 2 (four states, two invariants).

0:45 — The refusal

Click: RISK in the rail → VOTE on the first card. **Wait for:** red toast OPERATOR VOTE REFUSED, and the rulebook filling the panel. **Screen:** red X rows at the top, grey o rows below. **Say:** section 3. **Point at:** the FR-07 row, then its NO OVERRIDE tag, then sweep the grey rows. **If different:** the top card may hold a commandable object, so the refusal reason changes. **Read what is on screen** — the point is identical.

1:15 — The chain

Click: HOW in the rail. **Wait for:** globe flies to the corridor; red ribbon and ground strip paint. **Scroll:** slowly, at reading speed, as you talk. **Stop on these four steps:**

Step	What you say
3 — <i>Why the corridor is that wide</i>	density uncertainty, measured
5 — <i>What is underneath, from orbit</i>	DINOv3, 18 M cells, refusal above 60° N
8 — <i>The regulated number</i>	Ec, twenty times the limit
9 — <i>What the regulator's own method would say</i>	the 94% finding — do not cut this

1:50 — Ride it down

Click: ► FOLLOW DESCENT (top-centre of the globe). **Let run:** about 10 seconds. Optionally ¼× while it crosses land. **Screen:** camera falls with the stage; HUD shows altitude, flight-path angle, downrange. **Say:** the descent paragraph — including the "motion is a replay" line **while that caption is visible**. **Click:** X STOP FOLLOWING.

2:00 — The storm

Click: STORMS in the rail → ⚡ REPLAY GANNON — 10 MAY 2024. **Wait for:** camera pulls back; three bands paint; header flips to Kp 9 · G5. **Screen:** 3/8 ground stations reachable; map key bottom-left. **Say:** section 5. **Point at:** the station count, then the map key. **Click:** LIVE — the bands vanish. Worth the two seconds; the contrast sells it.

2:25 — Theme independence

Click: still in STORMS, scroll down → PROVE IT. **Screen:** five release-gate scenarios, all four state badges, engine changes required: 0. **Say:** section 6. **Note:** the FAA dispatch rulebook is API-side. Mention it in the sentence; don't go looking for it on camera.

2:45 — GPU and close

Click: FILTERS (bottom right) → ⚡ GPU SCREEN. **Wait for:** the numbers — objects, pairs, milliseconds, pair-checks per second. **Click:** close FILTERS → HOW to end on the signal. **Say:** section 7. **If WebGPU is missing:** the panel says so plainly. Skip to the close — a graceful degrade is not a failure.

Spare 60 seconds — best first

1. **Kill quorum.** FLEET → STOP on two nodes. Gate slams to BLOCKED; signal bar goes red. *"Flight Rule eight is non-negotiable. I have just removed this system's authority to act, in four seconds."* Restart them and it recovers.
 2. **Recourse.** In HOW, an unresolved step's acquisition buttons. *"It computes the cheapest set of measurements that would clear this, and verifies that no smaller set works."*
 3. **Autonomous agent.** MISSION → ACTIVATE, then watch the feed. *"It plans a real manoeuvre and submits itself to the same gate a human faces — and stands down when refused."*
 4. **Receipts.** Bottom of HOW. *"Hash-chained and replayable byte-for-byte."*
-

Recording notes

- **One take per scene.** Cut between them; nobody minds a cut.
- **Never narrate the click.** Click, wait for the screen to settle, then speak.
- **Let animations finish** before talking over them — the corridor draw and the storm bands both take about three seconds.
- **When the gate refuses, slow down.** That is the product working.
- Keep demo/astromesh-round2.mp4 cued as a fallback.
